Abstract (en)  
[origin: EP2634322A1] The drain pot has inlet box (10) for receiving and retaining trap reservoir, a baffle (11) which extends into reservoir, and opening (13) formed in reservoir bottom. A barrier (15) is arranged in flow path of wastewater. The retention level (R) of wastewater is formed in the reservoir. An outlet box (20) receives the wastewater flowing into drain pipe socket (30). An inspection unit (40) has closure element (41) having closable opening (42) through which socket is accessible without intersecting with inlet box. The opening is set lower than barrier and is set beneath retention level.
