Abstract (en)

[origin: EP2634338A2] The fitting has a fixed enclosure and a sliding leaf that is parallel movable and displaceable relative to the fixed closure, where the sliding leaf has a carriage and a running rail (6), along which the carriage, which is coupled with the sliding leaf, is displaceable. A lifting safety device is provided for preventing the jumping-out of the carriage from the running rail. The lifting safety device has a rotary portion that is rotatable around a rotational axis between an active- and passive positions. The lifting safety device is arranged directly on the carriage.
