Abstract (en)

A device for support and handling of sliding panels for doors, comprising a first fixed frame (10) adapted to be housed inside the door opening (V) astride uprights (MO) of the door frame, as well as a second mobile frame (20) disposed under the first frame (10) and connected to it with means that allow it to assume a retracted position, in which the panel (A) is housed inside the door opening (V) and abuts against the jambs (S) of the door frame, and an extracted position, in which the panel (A) is not housed inside the door opening (V) and is free to slide laterally, device also comprising a telescopic guide (30) with two or more tracks interposed between said second mobile frame (20) and the upper edge (A2) of the sliding panel (A).
