Abstract (en)
[origin: EP2634349A2] The door (1) comprises a closure device (11) that is adjusted between a closing position and an open position for closing and releasing a building door opening (5). The closure device is arranged in a portable door box (2) and is extended as a covering unit for closing/locking the building door opening to cover size. The cover unit is formed by a tarpaulin, film or tissue.
