Abstract (en)  
[origin: EP2634494A1] When water or the like splashed on a top face part (2A) of a cabinet (2) comes onto an outer edge part (11) that is a joint part in a cooking device (1), the water or the like can be made to flow sideward along a groove (10) and thus can be prevented from penetrating to inside of the cooking device (1). A bent part (12) of the cabinet (2) extends into the groove (10) on a control panel (7) and thus forms a waterproof wall against the water that is going to leak out of the groove (10), so that the water or the like splashed on the groove (10) of the control panel (7) from outside can be prevented from penetrating through the groove (10) into the cabinet (2).
