Abstract (en)

[origin: EP2634936A1] The system has waveguide (1), de-coupler (10), radio frequency amplifier (12) for amplifying satellite signal via signal line (11), input band-pass filter (13) and output band-pass filter (15). A mixer (14) mixes satellite signal with local oscillator signal to generate intermediate frequency signal amplified by intermediate frequency amplifier (16). The pass-band width of input band-pass filter corresponds to 70% of bandwidth of satellite signal. A demodulator (50) demodulates base-band signal to generate data signal. An Ethernet interface (70) exchanges data signals.
