Abstract (en)  
[origin: WO2012059666A1] The invention relates to a vacuum cleaner including a waste separation assembly that includes: at least one cyclonic separation step (8) comprising a main separator (10) via a cyclone having a longitudinal axis ?; and a removable waste recovery container (20) located under the main separator (10). According to the invention, the removable waste recovery container (20) is combined with a movable cover (22) that defines a connection pipe (24) between the main separator (10) and the removable container (22), wherein the connection pipe (24) has, at the connection thereof to the main separator (10), a generally annular inlet section (34) coaxial to the axis ?.
