Abstract (en)

[origin: WO2012059287A1] A grinding and/or cutting tool for a machine tool with an oscillating drive has a holder part for connection to a tool shaft and a main removal element for machining a workpiece, which element is formed as a hollow body and a cavity of the hollow body forms a particle discharging space. A longitudinal axis of the cavity lies in a plane of an oscillatory movement of the grinding and/or cutting tool.
