Abstract (en)
[origin: WO2012059876A2] A barrier (10), in particular for infrastructures or constructions, especially for separating lines of communication, such as railways, roads or the like, from the surrounding environment, comprises a lower part (11) supporting an upper part (13) of the same barrier extending above the lower part (11), the lower supporting part (11) comprising a plurality of segments which are lined up or placed side by side in the direction of extension of the barrier. The barrier comprises segments (12) forming a respective load-bearing member and segments (14) forming a respective infill member and which are alternated with and connected to the load-bearing segments (12).
