Abstract (en)

[origin: WO2012059161A1] The invention relates to a method for displacing a displacement element (1) of a motor vehicle in a motorised manner by means of a drive system, a first drive arrangement (3) being provided for displacing the displacement element (1), in a motorised manner, between a pre-closure position upstream of the main closure position, and the open position, a second drive arrangement (4) being provided for the motorised displacement of the displacement element (1) from the pre-closure position to the main closure position, the second drive arrangement (4) being controlled by a drive control system (8) so as to displace the displacement element (1) from the pre-closure position to the main closure position.
