Abstract (en)
[origin: WO2012059341A2] The invention relates to a refrigerator or freezer (10), especially a domestic refrigerator or freezer, and to a method for producing the same. The refrigerator or freezer (10) comprises an inner container (20), delimiting a refrigerated inner space (24) of the refrigerator or freezer, especially a cooling chamber and/or refrigerating chamber, which inner space can be closed by means of a door and is backed with a foamed insulating material (22), a carcass enclosing the inner container (20), and at least one cable (42) and/or at least one conduit (44) at least part of which is laid in the insulating material (22). The refrigerator or freezer (10) is characterized in that at least one conduit clip (32, 34) serving to fasten the at least one cable (42) and/or at least one conduit (44) is injection-molded onto the inner container (20) and/or onto the carcass in a predefined position.
