Abstract (en)

[origin: WO2012060752A1] The invention relates to a method, a performance data transmission device (17) and a computer program product for performing performance management reporting from a first to a second node in a communication system. The reporting concerns communication over one communication interface (WI) of a node in the communication system and the performance data transmission device comprises a data collecting unit (22) that obtains performance data relating to the communication over the communication interface for transmission to the second node and configuration data, a data scheduling unit that schedules the transmission of performance data and configuration data in a sequence of consecutive reports according to a reporting scheme, where the sequence makes up a set of reports, and a transmitting unit (28) that transmits the reports according to the reporting scheme and where configuration data is only present in a subset of the set of reports including at least one report.
