Abstract (en)

[origin: EP2636467A2] The device has an outer casting mold (10) that is provided with molded portions (12,14,16,18) for forming a cylinder crankcase (24). Several guides (20) are retracted into the casting mold to form cylinders. Several inner cores (32) are arranged in the mold to form a portion of a crank chamber (30). Several feeder cores (44) are arranged in the interior of the mold, after removing casting. The feeder cores are positioned between the guides at the side facing the crank chamber.
