Abstract (en)

[origin: EP2636570A1] The bogie (5) has a frame (13), and a structure (17) that is movable in rotation around a longitudinal axis with regard to the frame. The structure is intended to be linked with a case of a rail car. A damping jack (51) is connected by an end (53) to the frame by a connection kneecap (55). An upper rod (57) is related to another end (59) of the jack by another connection kneecap (61). A lower rod (65) is related to the upper rod and/or to the latter end of the jack by a third connection kneecap (67). The lower rod is related to the frame by a fourth connection kneecap (69).
