Abstract (en)

[origin: EP2636622A2] The winder (1) has three winding devices (3-5) arranged in a frame (2) for winding a film. The first and second winding devices are arranged at a height level (H1) and the third winding device is arranged on another height level (H2) that differs from the former height level smaller than the latter height level. The first and second winding devices border at two lateral end regions (6, 7) of the frame, and the third winding device is centrally arranged between both lateral end regions of the frame. The winding devices wind the film up to winding diameter of about 450 mm.
