Abstract (en)  
Provided is an elevator in which a governor can be located so as to avoid interference with equipment provided in a machine room and to ensure a passage for a worker and a maintenance space. An elevator (1) includes: a hoistway (3); and a machine room (5) located in an upper part of the hoistway, the machine room including at least a hoisting machine (13) and a governor (15) provided inside. The machine room includes a governor-housing space (35), which is open on a machine-room floor upper surface and is formed in a machine-room floor (17) constituting a bottom surface of the machine room. The governor is provided in the governor-housing space so that a governor bottom-portion is located at a position lower than the machine-room floor upper surface (33).
