Abstract (en)

[origin: EP2636636A1] The controller has a lifting gear (5) for lifting a load (3) suspended at a rope (4). An active swell compensator partly compensates a movement of a rope suspension point (2) and/or a load dropping point by controlling the lifting gear based on the swell and exhibits optimization function. An operator control unit controls the lifting gear based on demands of an operator, where distribution of kinematic limited parameter e.g. power and acceleration, of the lifting gear between the swell compensator and the operator control unit is adjusted. Independent claims are also included for the following: (1) a method for controlling a crane (2) a software comprising a code for execution of a method for controlling a crane.
