Abstract (en)

[origin: EP2636832A2] The fitting (1) has two articulatedly connected fitting halves for connecting a disk (2) i.e. door leaf, with another disk (3) or a wall (4). One of the fitting halves is mounted at the other fitting half and secured by an anti-lifting device against unhinging. The anti-lifting device axially engages at a bearing section of the latter fitting half. Releasable leg sections form a sleeve-shaped projection. The former fitting half comprises a retaining groove and a bearing seal that seals against the bearing section. The bearing seal extends between the leg sections.
