Abstract (en)

[origin: EP2637426A1] The holder (2) has an inner component (6) formed of material different from that of an outer component (4). The material of the inner component is harder than the material of the outer component. The inner component and the outer component are joined together with a form-locking connection or a force-locking connection. A pin support supports the battery holder pivotably on a battery compartment of a hearing device. The outer component surrounds the inner component around half of a circular cross-section of the inner component.
