Abstract (en)

[origin: WO2012062666A1] The present invention relates to a dishwasher (1) comprising a tub (2) wherein the washing process is performed, a tub inlet (3) that provides air entrance into the tub (2), a tub outlet (4) providing the air in the tub (2) to be discharged, an air channel (5) located outside the tub (2), providing a closed air cycle between the tub outlet (4) and the tub inlet (3), a fan (6) disposed on the air channel (5) and providing the air in the tub (2) to be sucked and a dehumidifying unit (7) disposed on the air channel (5), providing the air passing therethrough to be dried, and wherein the desiccant material (8) particles are prevented from being damaged during the regeneration process and are provided to be homogeneously regenerated.
