Abstract (en)

[origin: WO2012062974A1] The invention relates to a portable and ergonomic instrument for storing golf balls and tees and for automatically positioning a tee in the ground at a predetermined height and a ball in balance thereon, by means of a movement of one hand on the part of the player in the standing position. Said instrument consists primarily of a main body (10) serving as a storage unit (12) for balls (Bn), a multi-purpose shuttle (20) and a retaining clamp (P). After setting the desired height of the ball on the thumbwheel (50), the alternating movement of the shuttle (20) from abutment to abutment, using the knob (21), first upward, then downward and finally upward, enables the result to be achieved. Any golfer who has difficulty bending down or squatting, and those who do not wish to bend down or squat, may be interested in owning such an instrument.
