Abstract (en)
[origin: WO2012063125A2] The invention relates to a tool (1) for machining a workpiece (4). The tool (1) contains a tool element (3) that can be moved in the working direction (22) in order to be applied to a surface (21) of the workpiece (4). A drive element (19, 19a, 19b) that can be driven in a drive direction (24) transversally to the working direction (22) of the tool element (3) interacts with the tool element (3) to transmit a force. A transmission element (2, 2a, 2b) for transmitting force between the drive element (19, 19a, 19b) and the tool element (3) is positioned between the tool element (3) and the drive element (19, 19a, 19b).
