Abstract (en)
[origin: WO2012063130A2] The invention relates to a method for forming a surface relief on a available surface (21) of a compacted sintered component which forms the workpiece (4), using a forming element (3) that is moved in the working direction (22) towards the available surface (21). The working direction (22) runs radially in relation to the workpiece (4) and a contact surface of the forming element (3), the shape of said surface (5) having a relief (20), is applied to the surface (21) of the workpiece (4) in the working direction (22).
