Abstract (en)  
[origin: CA2815584A1] Illustrated and described is an apparatus for producing packaging, in particular composite packaging for liquid foodstuffs, having a cross-sectional area that decreases in the pour-out direction in the gable region, composed of a jacket (1) having a gable region (2) having a plurality of gable faces (6) and of a pour-out element (4), wherein the apparatus has at least one rotatable mandrel wheel (15) having a plurality of mandrels (17) for holding the jackets. Additionally illustrated and described are a method for producing such packaging and a gable press for use with the abovementioned apparatus. In order to allow easier and more cost-effective production, it is proposed that the apparatus has a gable press (28), assigned to a single mandrel-wheel position, for folding the gable region, in order to connect all of the gable faces of the gable region of the jacket to the pour-out element and to seal the protruding ears (7) in the same mandrel-wheel position.
