Abstract (en)

[origin: WO2012063226A1] An operator device for moving the leaf of a swing gate, comprises an outer tubular body (10), a mobile stem (12) inserted telescopically in the outer tubular body (10) and a motor apparatus (14) able to move said mobile stem. In the outer tubular body (16) there is a longitudinal slot (24) at least near one end, engaged by a end-stroke element (30) comprising a stop element (32) inside the outer tubular body (10). The mobile stem (12) comprises a radial abutment boss (40) suitable to axially engage the stop element (32) so as to stop the mobile stem, the end- stroke element (30) being translatable along the longitudinal slot (24) so as to be fixed in a desired axial position to define a limit stop position of the operator device.
