Abstract (en)
[origin: WO2012062679A1] The present invention relates to a cooking device (1) comprising an outer cabinet (2), an oven cavity (3) positioned such that there remains a gap between the outer cabinet (2) and itself, at least one heater (4) providing the air therein to be heated, at least one fan (5) which propels the heated air, a fan covering plate (6) which separates the section wherein the heater (4) and the fan (5) are situated from the oven cavity (3), at least one side wall (11) fastened to the both sides of the fan covering plate (6), a flange (17) situated on each of the both sides of the fan covering plate (6) and at least three passage gaps (10, 110, 210) disposed on each flange (17) so as to be one over the other with each other, and in the oven cavity (3) of which a homogenous heat distribution is provided.
