Abstract (en)

[origin: WO2012062877A2] The present invention relates to refrigerator (1) comprising a body (2), a door (3) which provides access into the body (2), two flanges (4), disposed on opposite sides of the door (3), extending into the body (2) when the door (3) is closed, two supporters (5) disposed on the flange (4), facing each other oppositely, at least one channel (6) disposed on the supporter (5), extending in the horizontal direction, at least one shelf (8) having a slide (7) disposed on the side wall thereof, borne in the channel (6), and that can make back and forth linear motion in the horizontal direction by the motion of the slide (7) in the channel (6) and a cover (9) having a closed position wherein it covers shelf (8) and an open position to which it shifts by making angular motion, wherein access into the shelf (8) is provided.
