Abstract (en)

[origin: WO2012062570A2] The invention relates to a lighting unit for a large electrical device, such as, in particular, an interior lighting unit for a refrigerating device, comprising a base part (10), which receives the luminous element, and a top part (20), which can be attached to the base part (10). According to the invention, a plurality of corresponding positive engagement elements are arranged on the top part (20) and on the base part (10) and are used to fasten the top part (20) to the base part (10), wherein said positive engagement elements can be caused to engage relative to the base part (10) by a longitudinal movement (2) of the top part (20) in the connection plane.
