Abstract (en)
[origin: WO2012064260A1] The invention relates to a device (1) at a mounting frame (2) for pictures and other information carriers (3), such as for example advertising, information and similar, and which is adapted to form a suspension means along at least one side of the angularly shaped frame (2) in a concealed way along a holding flange (4) of the frame (2). From said holding flange (4) a supporting profile flange (8) is extending. Said supporting profile flange (8) is extending along an essential part (L) of the edge portion (9) of a surrounding information carrier (3), whereby said edge portion (9) is guided and supported from the inside of the information carrier (3) by said supporting profile flange (8) which is located on the inside.
