Abstract (en)

[origin: WO2012062587A1] The invention relates to the use of an adhesive compound for encapsulating an (opto-)electronic application, containing an organometallically modified polymer created by reacting an elastomer with an organometallic compound, wherein the central atom of the organometallic compound is a metal or metalloid of the 3rd and 4th main groups or 3rd and 4th subgroups.
