Abstract (en)

[origin: EP2638975A2] The holder (9) has retaining web (23) for holding a high-voltage electrode (11) arranged in a powder channel (10). An annular groove is arranged concentrically with the powder channel and provided and open on the downstream side of the powder channel. A labyrinth for the high voltage is formed by the annular groove and the annular web of a cap nut (6), which locks the electrode holder. An air gap is formed between walls of the annular groove and the web. A snap-in groove is open in the radial direction. Independent claims are also included for the following: (1) a jet nozzle for a powder spray gun (2) a powder spray gun.
