Abstract (en)

A valve for discharging liquids from containers comprises a valve body (1) having an inlet opening (3) and an outlet opening (4) to define a transit conduit (12) for a liquid; an adjustment element (15) operatively positioned along said transit conduit (12) to maintain it selectively open or closed; the adjustment element (15) is automatically switchable from an open configuration of the transit conduit (12) to a closed configuration of the transit conduit (12).
