Abstract (en)
[origin: EP2639391A1] The sliding- and rotary-wing system has a rail profile (1), in which wings (2) is arranged as sliding- and rotary-wings and is displaceably mounted over bearing elements. A lateral outlet opening (14) for notching the bearing element of a wing is arranged in the rail profile. A closure part (5) is arranged at the rotary wing. The outlet opening completely covers the rail profile in the pivoted position of the rotary wing. A guide frame (4) is arranged at the rail profile and sectionally surrounds the lateral outlet opening. An independent claim is included for a closure part with a beam.
