Abstract (en)  
[origin: WO2012066379A1] The washing unit (A) of the present invention comprises at least one washing tank (1 ); wherein the top surface (5) of the washing tank (1 ) comprises a membrane like flexible material. At least one part of the said top surface (5) is movable so as to create the washing sink (7) when in a lower position. In order to achieve this, a moving mechanism located below the top surface (5) is used. When a washing process is not carried out the top surface (5) is the preferably flat and at least one part is in an upper position.
