Abstract (en)

[origin: WO2012065938A1] The invention relates to a handle for opening a movable panel of an automobile, including a gripping portion (10), and a counterweight member (40) opposing the inertia of the gripping portion (10), wherein said counterweight member (40) is mounted so as to be separable, with respect to the opening control, in an inertial direction of reentering the vehicle, wherein the handle also includes a blocking member (54) capable of assuming a position for blocking the opening control, characterized in that said handle includes a fitting (42) driving the blocking member (54) toward the blocking position thereof as a result of the counterweight (40) being separated with respect to the opening control.
