Abstract (en)

[origin: WO2012065706A1] The invention relates to a fastening arrangement (11) of a fuel supply device (10) on an internal combustion engine, in which at least one fuel distributing element (12) which runs along a longitudinal direction (14) and which has at least two connection openings (24) for connecting a respective fuel injection device is fastened to the internal combustion engine by means of at least one connecting part (36, 36'), wherein the connecting part (36, 36') is connected to the fuel distributing element (12) via a holding part (30, 30') which has a receptacle (32, 32') which completely surrounds at least one outer circumferential region of the fuel distributing element (12) and in which at least one portion of the fuel distributing element (12) is held, and wherein a point (62, 62'), which is situated in an elongation of the connecting element (36, 36') in a direction of extent (38, 38') of the latter, of the fuel distributing element (12) lies on a straight line (64) which connects the two connection openings (24), and also to a method for fastening a fuel supply device (10) of said type to an internal combustion engine.
