Abstract (en)
[origin: WO2012065850A2] The invention relates to a refrigeration device provided with an inner paneling (1) facing the cooling chamber of the refrigeration device, an exterior paneling (8) and a heat insulating layer (7) which is arranged therebetween and which is particularly produced by foaming. Said exterior paneling (8) has a large plate element (9), the lateral edges (13) being maintained in lateral door frame strips (17). According to the invention, said plate element (9) is an at least two-part plate composite comprising an inherently rigid support plate (10) and a decorative element (11) which has a reduced inherent rigidity and which is provided on the outer side on the support plate (10).
