Abstract (en)
[origin: WO2012065874A2] The invention relates to a refrigeration device door with an interior paneling (1) facing the cooling chamber of the refrigeration device (1), and exterior paneling (8) and a heat insulating layer (7) which is arranged therebetween and which is particularly produced by foaming. Said exterior paneling (8) comprises a large plate element (9) which adjoins the heat insulating layer (7), the lateral edges (13) being maintained in lateral door frame strips (17). According to the invention, the door frame strips (17) comprise a holding profile (15) which is free from undercuts in the direction of the structural depth of the door (y), in which the plate element (9) can be inserted in the direction of the structural depth (y).
