Abstract (en)

[origin: EP2641481A1] The method involves conveying a wrapping material strip (33) in a longitudinal axial conveying direction (13') and embossing the wrapping material strip, where a strand (21) of a tobacco processing industry is formed and conveyed in a longitudinal axial direction (22). The strand is wrapped with the wrapping material strip, where a rod-shaped article is cut from the strand. The quality or position of the embossing structure is determined based on the digitized image data of the strand or the rod-shaped article. An independent claim is included for a production machine for rod-shaped articles of a tobacco processing industry.
