Abstract (en)
[origin: EP2641638A2] The device has a processing plate holder (2) comprising a retainer (3) for releasable insertion of a processing plate (4). The plate holder comprises a grasp portion (14) for manual handling of the device. A support surface comprises a support portion (12) for resting on a surface side of a ski- or snowboard during processing of edges of the ski- or snowboard. The retainer is formed such that the processing plate is protruded above the support surface with a working portion for working on the edges, so that a processing surface of the working portion and the support surface span an angle. The processing plate is made of plastic i.e. polyamide, or metal and formed as a rasp.
