Abstract (en)

[origin: EP2641660A1] The method involves mounting a sleeve (14) of a hoop (11) inside an annular wall (3a) of a collar (3) by placing a locking unit (15) face to face radially with regard to a shoulder (4). A body (8) of a distribution unit (5) is made to slide inside the sleeve to place the locking unit in radial support on an external range (17) and in axial support on the shoulder so as ensure locking of the fixing of the hoop in the collar. The body of the distribution unit is placed inside of the sleeve in a pre-assembled position. An independent claim is also included for a fluid product distribution bottle.
