Abstract (en)

[origin: EP2642049A2] The handle (100) has an electronic unit which is arranged in a housing (10) of a door handle (1). Lock cylinders are arranged within the housing. An emergency key is inserted from outside to the housing to activate a security system (4) of a motor car (2) during emergency situation. A lid element (30) covering an outer region of the lock cylinder is moved between a closing position and an opening position. The lid element is connected with the housing during both closing and opening positions.
