Abstract (en)

[origin: EP2642051A2] The lock (10) has a locking element (15) plunged into a recess (7") of a drive bolt (7) transverse to a movement direction of the drive bolt, where the locking element is displaceably mounted. The locking element is subjected to force into an activated position by a force storage device e.g. pressure spring (18). A release unit (14) consists of a projecting button (19) arranged in the movement direction of the drive bolt over a lock faceplate (13). The projecting button is attached to the locking element at an inclined surface (20) extending to a displacement direction (R).
