Abstract (en)
[origin: EP2642211A1] The present invention pertains to a radiator assembly 2 comprising: A radiator 4 having an upper portion 6 and a lower portion 8 when mounted in its intended use position, a lower mounting bracket 12 to be fixed relative to a wall 10 and defining a pivotal axis 14 for the radiator 4, the lower mounting bracket 12 being configured to be pivotably attached to the lower portion 8 of the radiator 4, an upper mounting bracket 20 to be fixed relative to said wall 10, the upper mounting bracket 20 being configured to be releasably attached to the upper portion 6 of the radiator 4, but can be released to permit the radiator 4 to pivot relative to the pivot axis 14, wherein the upper mounting bracket 20 comprises a release and locking mechanism 54, and a retention member 22 for releasably engaging a cooperating upper mounting member 24 placed at the upper portion 6 of the radiator 4, said retention member 22 being configured for releasing and locking the radiator 4 by a push on a push button 26, said release and locking mechanism 54 being enclosed inside a housing 28.
