Abstract (en)

[origin: EP2642502A1] The assembly has a tripping block (B) to be associated with a circuit breaker. The block includes a relay (8) to transmit a tripping command to the circuit breaker due to manual opening action or the occurrence of a short circuit in an electric circuit protected by the circuit breaker. An indicator (V) indicates a short-circuit tripped state of the circuit breaker, where a reset lever (12) for resetting the indicator is controlled by re-closure of the circuit breaker after opening of the circuit breaker following the short-circuit.
