Abstract (en)
[origin: WO2012071007A1] The present invention relates to a protection gown(1) comprising a front part (2), a back part joined to the front part and two sleeves, said back part consisting of two portions (3,4) being connected to each other in a neckline region of said gown. According to the invention said two portions (3,4) of the back part of the protection gown (1) are connected to each other by a strip of material (7), the connection between said two portions of the back part of the protection gown can be released by manually breaking the strip of material or its attachment to one of said two portions of the back part of the protection gown, and in that at least a portion of the neckline of said gown is resiliently stretchable.
