Abstract (en)
[origin: WO2012068594A1] Disclosed is a device (9) for releasably coupling a drawer (2) to a retractable rail (8) of a drawer retraction guide (3), comprising: - a locking part (10) which can be releasably locked to releasably couple the drawer (2) to the retractable rail (8) of the drawer retraction guide (3); - a handle part (11) which is designed to be actuated by hand and allows the locking part (10) to be released relative to the retractable rail (8) of the drawer retraction guide (3); and - an opposite retaining part (15) between which and the locking part (10) the rail (8) is accommodated in the mounted position. The locking part (10) can be moved into a direction pointing away from the opposite retaining part (15) by a hand applying pressure to the handle part (11), the opposite retaining part (15) being provided with at least one resilient tongue (16).
