Abstract (en)

[origin: WO2012069234A1] A device for controlled secondary cooling, comprising a network of a continuous casting installation through which a cooling medium flows and which has segments (31) for guiding a strand of metal, in particular a strand of steel, can be adapted to the respective casting task, in particular with regard to the grade of steel and special tasks arising during the casting process, characterized in that the at least one pressure network comprises at least one self-regulating pressure control element.
