Abstract (en)
[origin: WO2012069381A1] The invention relates to a container (1) having flexible walls (2, 3), comprising an opening (4) provided with a means for maintaining same open, said means having two flexible elongate elements (5, 6) connected at the ends thereof by a first hinge (7) and by a second hinge (8), which are adapted for bringing the two elements (5, 6) against each other in a first configuration and for moving the two elements (5, 6) away from each other in a second configuration in which the two elements (5, 6) are folded back on themselves relative to the first configuration, characterized in that both elements (5, 6) are at least partially made of a flexible strip and in that the first hinge (7) includes a cut-out (10) in a portion of the body of the strip, said cut-out (10) being oriented towards the outside of the container (1) in the first configuration.
