Abstract (en)

[origin: WO2012068691A1] The invention relates to a conveying chain for a conveying means (1) of a conveying device, comprising a plurality of chain links (2) connected to each other, wherein the chain links (2) are connected to each other by means of articulated connections so as to each be pivotable about a first axis (A1) and about a second axis (A2) oriented perpendicular to the first axis (A1) in order to form the conveying chain. In regard to shape, the conveying chain is constructed of identical chain links (2). The chain links (2) each comprise a receptacle (5) on a first end section and a coupling body (3) on a second end section that engages in the receptacle (5) of an adjacent chain link (2), wherein the receptacle (5) and the coupling body (3) are shaped in such a way that the receptacle and the coupling body can be connected to each other by means of an insertion-rotation motion in order to form the articulated connection.
